

Step Overview

End-to-end lifecycle overview

From ServiceNow registration to Salesforce closure and service intelligence.

Step 1

Customer case registered in ServiceNow

A high-priority enterprise support issue enters the source system.

Lifecycle

- 1. ServiceNow Case
- 2. API Sync
- 3. AI Triage
- 4. Customer Context
- 5. Knowledge
- 6. Parts
- 7. Scheduling
- 8. Technician
- 9. Resolution
- 10. Closure

Incident: INC0010477

Priority 1

New

Customer

Northstar Retail Group

Channel

ServiceNow Customer Portal

Asset

VoltEdge VX-900 Router

Short Description

Payment terminals are down in 3 stores

Business Impact

Stores cannot process card payments

Customer Message

We have multiple routers down across three retail stores. Payment terminals are offline. Need urgent field support today.

Field	Value	Status
Urgency	High	Captured
SLA	Premium 4-hour response	Pending validation
Location	Dallas metro stores	Captured

Starting point

Agent role

The customer raises an issue in ServiceNow, where the incident is first captured by the OEM or partner support portal.

Outcome

A structured case is ready for API sync into Aptivance Salesforce, where agentic AI begins orchestration.

Step 2

API integration reflects the case in Salesforce

The ServiceNow incident becomes an actionable Salesforce case for Aptivance.

Lifecycle

1. ServiceNow Case

2. API Sync

3. AI Triage

4. Customer Context

5. Knowledge

6. Parts

7. Scheduling

8. Technician

9. Resolution

10. Closure

Severity

Critical

Status

New - AI Triage Pending

SLA

Premium response target

Outcome of the integration

Agent role

The case is not retyped. Core fields, attachments, notes, and customer metadata move into Salesforce automatically.

Outcome

Aptivance gets a single operational record in Salesforce while ServiceNow remains traceable as the original source.

Step 3

Routing & Triage Agent classifies the issue

The first AI agent decides priority, queue, skill group, and next actions.

Lifecycle

- 1. ServiceNow Case
- 2. API Sync
- 3. AI Triage
- 4. Customer Context
- 5. Knowledge
- 6. Parts
- 7. Scheduling
- 8. Technician
- 9. Resolution
- 10. Closure

Salesforce Case: CASE-00 Critical 1 Revenue Impact AI Triage Complete

Subject
Payment terminals offline across 3 stores

AI Summary
Northstar Retail reports router failure impacting payment terminals at three Dallas-area stores. Requires premium support validation, networking skill group, field service assessment, and parts check.

AI Decision	Value	Action
Priority	P1 - Critical	Set on case
Queue	Network Field Support	Routed
Next step	Validate entitlement	Triggered

Routing & Triage Agent

Agent role
Reads the incoming case, identifies business impact, severity, required skill, account type, and likely service path.

Outcome
The case is routed to the right queue in minutes, with priority, SLA timer, and required next steps already defined.

Step 4

Customer History Agent enriches the case

Salesforce pulls account, entitlement, asset, and service history into one view.

Lifecycle

1. ServiceNow Case
2. API Sync
3. AI Triage
4. Customer Context
5. Knowledge
6. Parts
7. Scheduling
8. Technician
9. Resolution
10. Closure

Unified customer profile

Account

Northstar Retail Group

Support Tier

Premium 4-hour response

Installed Base

420 active VX-900 routers

Contract

Enterprise Network Support

Recent Pattern

3 similar router failures in 30 days

Open Opportunity

Q4 network refresh discussion with account team

History Item	Finding	AI Flag
Past incidents	Repeated failure	Trend risk
Entitlement	Premium active	Dispatch allowed
Stakeholder	VP Store Ops	Notify AM

Customer History Agent

Agent role

Connects the case to the account, installed asset, contract entitlement, repair history, prior escalations, and commercial context.

Outcome

Agents no longer start blind. They see customer value, SLA eligibility, recurring issue risk, and account-team involvement upfront.

Step 5

Knowledge Base Agent recommends the right playbook

Approved troubleshooting guidance is surfaced before dispatch.

Lifecycle

- 1. ServiceNow Case
- 2. API Sync
- 3. AI Triage
- 4. Customer Context
- 5. Knowledge
- 6. Parts
- 7. Scheduling
- 8. Technician
- 9. Resolution
- 10. Closure

Recommended articles and actions

Knowledge Article	Confidence	Use
VX-900 Payment Terminal Connectivity Checklist	94%	Agent steps
Router Power Module Failure Procedure	89%	Field prep
Retail Store Emergency Network Workarounds	82%	Customer guidance

AI-generated internal note

Likely VX-900 power module or firmware-related failure. Ask customer to confirm LED state, UPS status, and affected serial numbers. Prepare replacement module and certified technician if reboot and failover steps do not restore payment traffic.

Knowledge Base Agent

Agent role

Searches approved repair guides, product manuals, troubleshooting articles, field checklists, and customer communication templates.

Outcome

The support team gets consistent guidance, faster diagnostics, and less dependency on tribal memory.

Step 6

Parts & Logistics Agent checks availability

The agent confirms the required replacement part before scheduling a visit.

Lifecycle

1. ServiceNow Case
2. API Sync
3. AI Triage
4. Customer Context
5. Knowledge
6. Parts
7. Scheduling
8. Technician
9. Resolution
10. Closure

Parts availability

Part	Location	ETA	Status
VX-900 Power Module	Dallas warehouse	Today 11:00 AM	Available
Router spare kit	Technician van stock	On hand	Available
Backup router unit	Austin depot	Tomorrow 9:00 AM	Fallback

AI recommendation

Reserve VX-900 Power Module from Dallas warehouse and assign to work order. Technician can carry spare router kit for first-time-fix protection. No backorder risk detected.

Parts & Logistics Agent

Agent role

Checks required part, inventory, warehouse location, technician van stock, compatible alternatives, shipment ETA, and backorder risk.

Outcome

Aptivance avoids dispatching a technician without the right part, improving first-time-fix probability.

Step 7

Scheduling Agent creates the optimal field plan

Technician skill, parts readiness, location, and SLA are matched in Salesforce Field Service.

Lifecycle

1. ServiceNow Case
2. API Sync
3. AI Triage
4. Customer Context
5. Knowledge
6. Parts
7. Scheduling
8. Technician
9. Resolution
10. Closure

Dispatcher console

Technician	Skill Match	Travel Time	Availability
Angela R.	VX-900 certified	22 min	1:00-3:00 PM
Marcus L.	Network certified	45 min	2:00-5:00 PM
Priya S.	General hardware	30 min	Tomorrow

Selected appointment

Angela R. scheduled today, 1:00-3:00 PM. Required part arrives at 11:00 AM. Appointment is inside premium SLA window. Work order WO-003921 created.

Scheduling Agent

Agent role

Evaluates technician location, certification, availability, travel time, service window, SLA deadline, and parts readiness.

Outcome

The best slot is recommended and a Field Service work order is created with the right technician and required prep.

Step 8

Technician receives a guided mobile work order

The field team sees the case context, parts, checklist, and customer notes.

Lifecycle

1. ServiceNow Case
2. API Sync
3. AI Triage
4. Customer Context
5. Knowledge
6. Parts
7. Scheduling
8. Technician
9. Resolution
10. Closure

Technician Assist Agent

Agent role

Gives the technician a mobile-ready summary, diagnostic checklist, asset details, customer notes, and required proof-of-work steps.

Outcome

The technician completes the job faster, documents the repair properly, and captures evidence for case closure.

Step 9

Resolution & Drafting Agent prepares closure communication

The agent summarizes work performed and drafts the customer update.

Lifecycle

1. ServiceNow Case

2. API Sync

3. AI Triage

4. Customer Context

5. Knowledge

6. Parts

7. Scheduling

8. Technician

9. Resolution

10. Closure

Resolution workspace

Work performed

Replaced VX-900 power module, tested payment terminal traffic, confirmed stores are back online.

Root cause

Power module failure on primary router. Spare kit used for validation.

Draft customer update

Your network service has been restored across the affected stores. Our certified technician replaced the failed router power module, tested payment terminal connectivity, and confirmed transaction traffic is operational. We will continue monitoring the case for the next 24 hours.

Resolution & Drafting Agent

Agent role

Converts technician notes, case timeline, troubleshooting steps, and customer impact into clear internal and customer-facing summaries.

Outcome

The support manager approves a polished update, reducing manual writing time while keeping human control over the final message.

Step 10

Case closed and insights logged

The full lifecycle ends with closure, trend detection, and account intelligence.

Lifecycle

1. ServiceNow Case
2. API Sync
3. AI Triage
4. Customer Context
5. Knowledge
6. Parts
7. Scheduling
8. Technician
9. Resolution
10. Closure

Closed case dashboard

Resolved SLA Met

Resolution Time	First-Time Fix
5 hours 35 minutes from ServiceNow creation	Yes
Customer Impact	Follow-up
Payment terminals restored	24-hour monitoring task created

Insight generated

VX-900 power module incidents are increasing across retail accounts. Recommend proactive service bulletin, parts stocking review, and account-manager outreach for network refresh opportunity.

Insight & Logging Agent

Agent role

Logs lifecycle milestones, SLA performance, repair reason, parts usage, customer sentiment, and recurring issue trends.

Outcome

Leadership sees operational trends, the account team gets expansion signals, and the service organization improves future response.
